

Ferns & Petals Sales Analysis Report

Executive Summary

This project analyzes sales data from Ferns & Petals (FNP), a gifting company that serves customers across multiple occasions such as Anniversary, Birthday, Diwali, Holi, Raksha Bandhan, and Valentine's Day.

The objective of this analysis was to identify revenue-driving opportunities, understand customer purchasing behavior, evaluate product performance, and uncover seasonal sales patterns to support data-driven business decisions.

Business Problem

Ferns & Petals wanted to gain visibility into:

- Revenue performance across different occasions
- Top-performing products and categories
- Customer spending behavior
- City-wise order distribution
- Monthly sales trends
- Delivery performance

The business required a centralized dashboard to monitor KPIs and generate actionable insights for improving sales performance and customer satisfaction.

Dataset Overview

The analysis was performed using three datasets:

Customers Dataset

Contains customer-related information used for customer analysis.

Orders Dataset

Contains order details including revenue, quantity, order date, delivery date, and occasion information.

Products Dataset

Contains product and category information used for product performance analysis.

Project Workflow

1. Data Cleaning

- Removed irrelevant attributes
- Corrected formatting inconsistencies
- Standardized fields for analysis
- Prepared structured datasets for reporting

2. Data Modeling

- Integrated Customers, Orders, and Products datasets
- Established relationships between datasets
- Built a structured data model for analysis

3. Business Analysis

Performed analysis on:

- Revenue trends
- Customer spending behavior
- Product performance
- Occasion-wise sales
- Monthly sales performance
- City-wise order distribution
- Delivery performance

4. Dashboard Development

Developed an interactive Excel dashboard using:

- Pivot Tables
- Pivot Charts
- KPI Cards
- Slicers

Key Performance Indicators

KPI	Value
Total Revenue	₹35.20 Lakhs
Total Orders	1,000
Average Customer Spending	₹3,520.98
Average Delivery Time	5.53 Days

Key Insights

Occasion Performance

- Anniversary generated the highest revenue among all occasions.
- Raksha Bandhan and All Occasions were also strong contributors to total sales.

Product Performance

- Magnam Set emerged as the top revenue-generating product.
- The Colors category generated the highest revenue among all categories.

Customer Analysis

- Average customer spending was approximately ₹3,520.
- Customer purchase behavior varied significantly across occasions.

Sales Trends

- Revenue peaked during February and August.
- Seasonal demand patterns were clearly visible across the year.

Geographic Analysis

- Several cities consistently generated higher order volumes.
- These locations represent strong opportunities for targeted marketing campaigns.

Delivery Analysis

- Average delivery time was 5.53 days.
- Delivery performance can be monitored to improve customer experience and operational efficiency.

Business Impact

The insights generated from this analysis can help the business:

- Improve inventory planning for high-demand products
 - Optimize marketing campaigns around high-performing occasions
 - Allocate resources more effectively during seasonal demand peaks
 - Increase customer retention through targeted promotions
 - Support revenue forecasting and strategic planning
 - Improve operational efficiency through delivery performance monitoring
-

Recommendations

Marketing Strategy

- Increase promotional efforts before high-revenue occasions such as Anniversary and Raksha Bandhan.
- Create occasion-specific campaigns for seasonal demand periods.

Product Strategy

- Prioritize inventory for top-performing products and categories.
- Promote high-performing products through bundled offers and recommendations.

Customer Strategy

- Develop targeted offers based on customer spending behavior.
- Encourage repeat purchases through loyalty and retention initiatives.

Regional Growth

- Focus marketing efforts on cities with consistently high order volumes.
- Launch location-based campaigns to maximize conversion rates.

Conclusion

This project demonstrates how business data can be transformed into actionable insights using Excel-based analytics and dashboarding techniques.

By combining data cleaning, data modeling, KPI reporting, and interactive visualization, the dashboard provides a clear view of business performance and supports data-driven decision-making across sales, marketing, and operations.
